

Markdown Cheatsheet for Websites

A practical reference for Markdown syntax, plus the HTML/CSS/JavaScript concepts you need to turn Markdown content into a real website.

1. Headings

```
# Main Title
## Section
### Subsection
#### Smaller heading
##### Even smaller
##### Smallest
```

2. Text formatting

```
**Bold text**

*Italic text*

***Bold and italic***

~~Strikethrough~~

`Inline code`
```

3. Paragraphs & line breaks

```
This is a paragraph.

This is another paragraph.

First line
Second line
```

The two spaces at the end create the line break.

4. Links

```
[Google](https://www.google.com)

[About Me](/about)

[Projects](/projects)
```

5. Images

```
![Description of image](image.jpg)

![My profile photo](images/profile.jpg)

![My photo](profile.jpg)(https://example.com)
```

6. Lists

- Python
- MATLAB
- Simulink
- Energy Systems
- Energy
 - Solar
 - Wind
 - Batteries
- Transport
 - EVs
 - Hydrogen

1. Introduction

- 2. Methodology
- 3. Results
- 4. Conclusion

7. Checkboxes

- ☐ Learn HTML
- ☐ Learn CSS
- ☒ Learn Markdown
- ☐ Build website

8. Quotes

- > This is a quotation.
- > You can also have
- > multiple lines.

9. Code

Use ``print()`` to display something.

```
```python
print("Hello World")
```

```javascript
console.log("Hello World");
```

```html
<h1>Hello World</h1>
```
```

10. Horizontal line

Useful for separating sections of a webpage.

11. Tables

| Technology | Experience | Level |
|--------------|------------|--------------|
| Python | 3 years | Advanced |
| MATLAB | 4 years | Advanced |
| Simulink | 3 years | Advanced |
| PowerFactory | 2 years | Intermediate |

12. Escaping Markdown

This isn't italic

13. HTML inside Markdown

```
<div>
  <h2>My Project</h2>
  <p>This is my energy simulation project.</p>
</div>

## My Project

This project uses MATLAB and Simulink.

<div>
  
</div>
```

14. Adding CSS

```

<div style="background: #f5f5f5; padding: 20px; border-radius: 10px;">

## My Project

This is my project description.

</div>

<link rel="stylesheet" href="style.css">

.project-card {
  background: #f5f5f5;
  padding: 20px;
  border-radius: 10px;
}

<div class="project-card">

## My Project

My project description.

</div>

```

15. Page structure

```

my-website/
■
■■■ index.md
■■■ about.md
■■■ projects.md
■■■ contact.md
■
■■■ images/
■   ■■■ profile.jpg
■   ■■■ project1.png
■
■■■ styles.css

# Hi, I'm Ashir

Energy Engineer | Simulation | Energy Transition

## About Me

I'm an engineer working on energy systems,
simulation and decarbonization.

## Projects

- [EV Energy Management](projects/ev.md)
- [Data Center Cooling](projects/datacenter.md)
- [Microgrid Optimization](projects/microgrid.md)

## Contact

[LinkedIn](https://linkedin.com)

```

The important distinction

Technology	What it does
Markdown	Content / structure
HTML	Structure of webpage
CSS	Appearance / design
JavaScript	Interactivity
Git	Version control

Technology	What it does
GitHub	Stores your code
GitHub Pages	Hosts your website

Recommended learning order

Markdown → HTML → CSS → JavaScript → Git/GitHub → Website hosting

Markdown is easy to learn and is mainly for content. HTML and CSS are the bigger steps if your goal is to create polished, real websites.
